

Promega Corporation Madison, WI			Approved		
			Quality Standard Operating Procedure		
Document #:	QSOP24.009	Revision:	9	Effective Date:	Jul 20, 2026
Title:	Change Process				

1 PURPOSE

The purpose of this document is to describe the requirements to manage controlled changes within the quality system.

1.1 Table of Contents

1	Purpose
1.1	Table of Contents
2	Scope
3	Governing Quality Process (QP) Document
4	Roles Within the Process
5	Definitions
6	Process
6.1	Overview
6.2	Change Control Processes
6.3	Active Pharmaceutical Ingredient (API) Change Process
6.4	Program-Level Change Controls
6.5	Implementing Change Records
6.6	Closing Change Records
6.7	System Outage
7	Appendix
8	Related Procedure (QSOP, QRS)
9	Related Form (QFRM)

2 SCOPE

This procedure applies to change control for Product Manufacturing and Testing, Quality System, ERP Controlled Fields, Expiration Date Changes, Equipment Changes, cGMP Software, cGMP Product Software Changes and Supplier Changes at the Madison, Wisconsin location.

3 GOVERNING QUALITY PROCESS (QP) DOCUMENT

This process meets the requirements specified in the following:

QP Document

- **QP24**, Change Control

It is the responsibility of the user to ensure this is the current revision.

Promega Corporation Madison, WI			Approved		
			Quality Standard Operating Procedure		
Document #:	QSOP24.009	Revision:	9	Effective Date:	Jul 20, 2026
Title:	Change Process				

4 ROLES WITHIN THE PROCESS

Role	Responsibilities	Role limited to following department or job position
Change Initiator	- Identifies and enters change description information for review - Identifies what change type is needed for the proposed change - Provides any additional details or information the Change Champion may need to complete the necessary actions - Requests Change Records be voided, if needed	None
Change Champion	- Owns the Change Document within the EtQ Change Module and guides the Change record through the process. The Initiator and Champion may be the same person - Monitors completion of the evaluations and assigned actions as required for each change type - May act as an action owner - Requests Change Records be voided, if needed	None
Evaluation Owners	- Provides information and data needed to assess the impact of the proposed change(s), as applicable - Defines actions needed	None
Action Owner	Is assigned task(s) within the Change Module, completes the task(s), and provides evidence of completed actions	None
Change Approver	Reviews change record to ensure: - Compliance with process and quality system requirements - Plan, actions and information (and data, if applicable) are complete and adequate to support implementing the identified change	None

It is the responsibility of the user to ensure this is the current revision.

Promega Corporation Madison, WI			Approved		
			Quality Standard Operating Procedure		
Document #:	QSOP24.009	Revision:	9	Effective Date:	Jul 20, 2026
Title:	Change Process				

Role	Responsibilities	Role limited to following department or job position
	- Change is appropriate and will not have an adverse impact on product or quality system, if applicable - Approval roles can be found in the change types respective QRS	
Post Implementation Review Owner (for API Changes)	- Identify and assess first batch(es) impacted by change - Provide summary of the post implementation review, include assessment to confirm alignment to the final product specification	Active Pharmaceutical Ingredient (API) Subject Matter Expert (SME)
API QA Approver (for API Changes)	Reviews change record to ensure: - Compliance with API related process and quality system requirements - Plan, actions and information (and data, if applicable) are complete and adequate to support implementing the identified change - Change is appropriate and will not have any unintended or adverse impact on the API - Review change record to ensure post implementation assessment provides rationale and analysis to support the change	Active Pharmaceutical Ingredient (API) Quality Assurance
Module Coordinator	- Assists Change Initiator/Champion through the change process if necessary - Tracks and trends on change process - Approves documentation, if applicable - VOIDS Change Packages, if needed	QA – Quality Systems Team

It is the responsibility of the user to ensure this is the current revision.

CONFIDENTIAL. Property of Promega Corporation. Do Not Reproduce or Distribute Without the Prior Written Permission of Promega Corporation.

Promega Corporation Madison, WI			Approved

Title:	Change Process				

5 DEFINITIONS

Term or Acronym	Definition
API	Active Pharmaceutical Ingredient
cGMP Software Change	A change impacting software that is used to support Promega internally, or to maintain cGMP compliance.
cGMP Product Software Change	A change impacting regulated product software that is sold to Promega customers.
Change Order (CO)	A requirement for revision of existing documents that are located in the EtQ Document Control module.
Country of Origin (COO)	The country in which an article or product is manufactured, produced, or grown.
Closed – Implemented	The decision to proceed with the change has been made and all actions have been completed where applicable. If there are no actions, changes were evaluated within the change type and accepted.
Closed – Not Implemented	A decision not to proceed with the change was made during the process. Actions associated with the change will not be implemented.
Equipment Change	Changes to Qualified Equipment, equipment undergoing qualification, or systems that control or monitor environmental conditions used to manufacture or store product. Also included are facilities and systems that provide utilities to equipment or processes directly associated with the manufacture and storage of product.
ERP Data Change	Change to a controlled field in the ERP System.
Expiration Date Change	A change to the controlled expiration date field in the ERP System for a specific batch of a material. This process can only be used if the customer-facing label lacks an expiration date.
Form, Fit or Function	- Form: The shape, size, dimensions, mass, weight, and other parameters, which uniquely characterize an item - Fit: The ability of an item to physically interface or interconnect with or become an integral part of another item - Function: The action or actions, which an item is designed to perform See Appendix 1 for more information related to Form, Fit, or Function.
Product and Process Change	This change type has a substantial/significant, or potentially substantial/significant impact on Form, Fit or Function of product or processes. Alternatively, the change could involve substantial/significant

It is the responsibility of the user to ensure this is the current revision.

Promega Corporation Madison, WI			Approved		
			Quality Standard Operating Procedure		
Document #:	QSOP24.009	Revision:	9	Effective Date:	Jul 20, 2026
Title:	Change Process				

Term or Acronym	Definition
	coordination across multiple areas. Consideration of substantial/significant changes to registered products where such changes could affect the safety and performance of the device or the conditions prescribed for use of the device may require notification to the notified body, certifying agency or regulatory body.
Program-Level Change Control	A master change control record that provides coordinated governance for large projects involving multiple interdependent changes. These change controls establish overall project scope and risk assessment. Individual change controls are linked to and tracked under the program-level change control.
Quality System Change	A change to the Quality Management System (QMS) or a quality process within the quality system. These substantial/significant changes may require notification to external parties such as notified body, certifying agency or regulatory body. Substantial/significant changes that require communication: • Certificate scope removals or additions (devices, activities) • Site removals or additions • Client information such as company name, client contact name, legal entity • Change of European authorized representative
Supplier Change	Any changes that may impact the quality of a material or service provided by an approved Supplier. Supplier Change is "A communication from existing supplier or service provider of a change to company name, materials, methods, facilities or similar.
Void	A decision to not proceed with the change was made prior to any activities being completed.

6 PROCESS

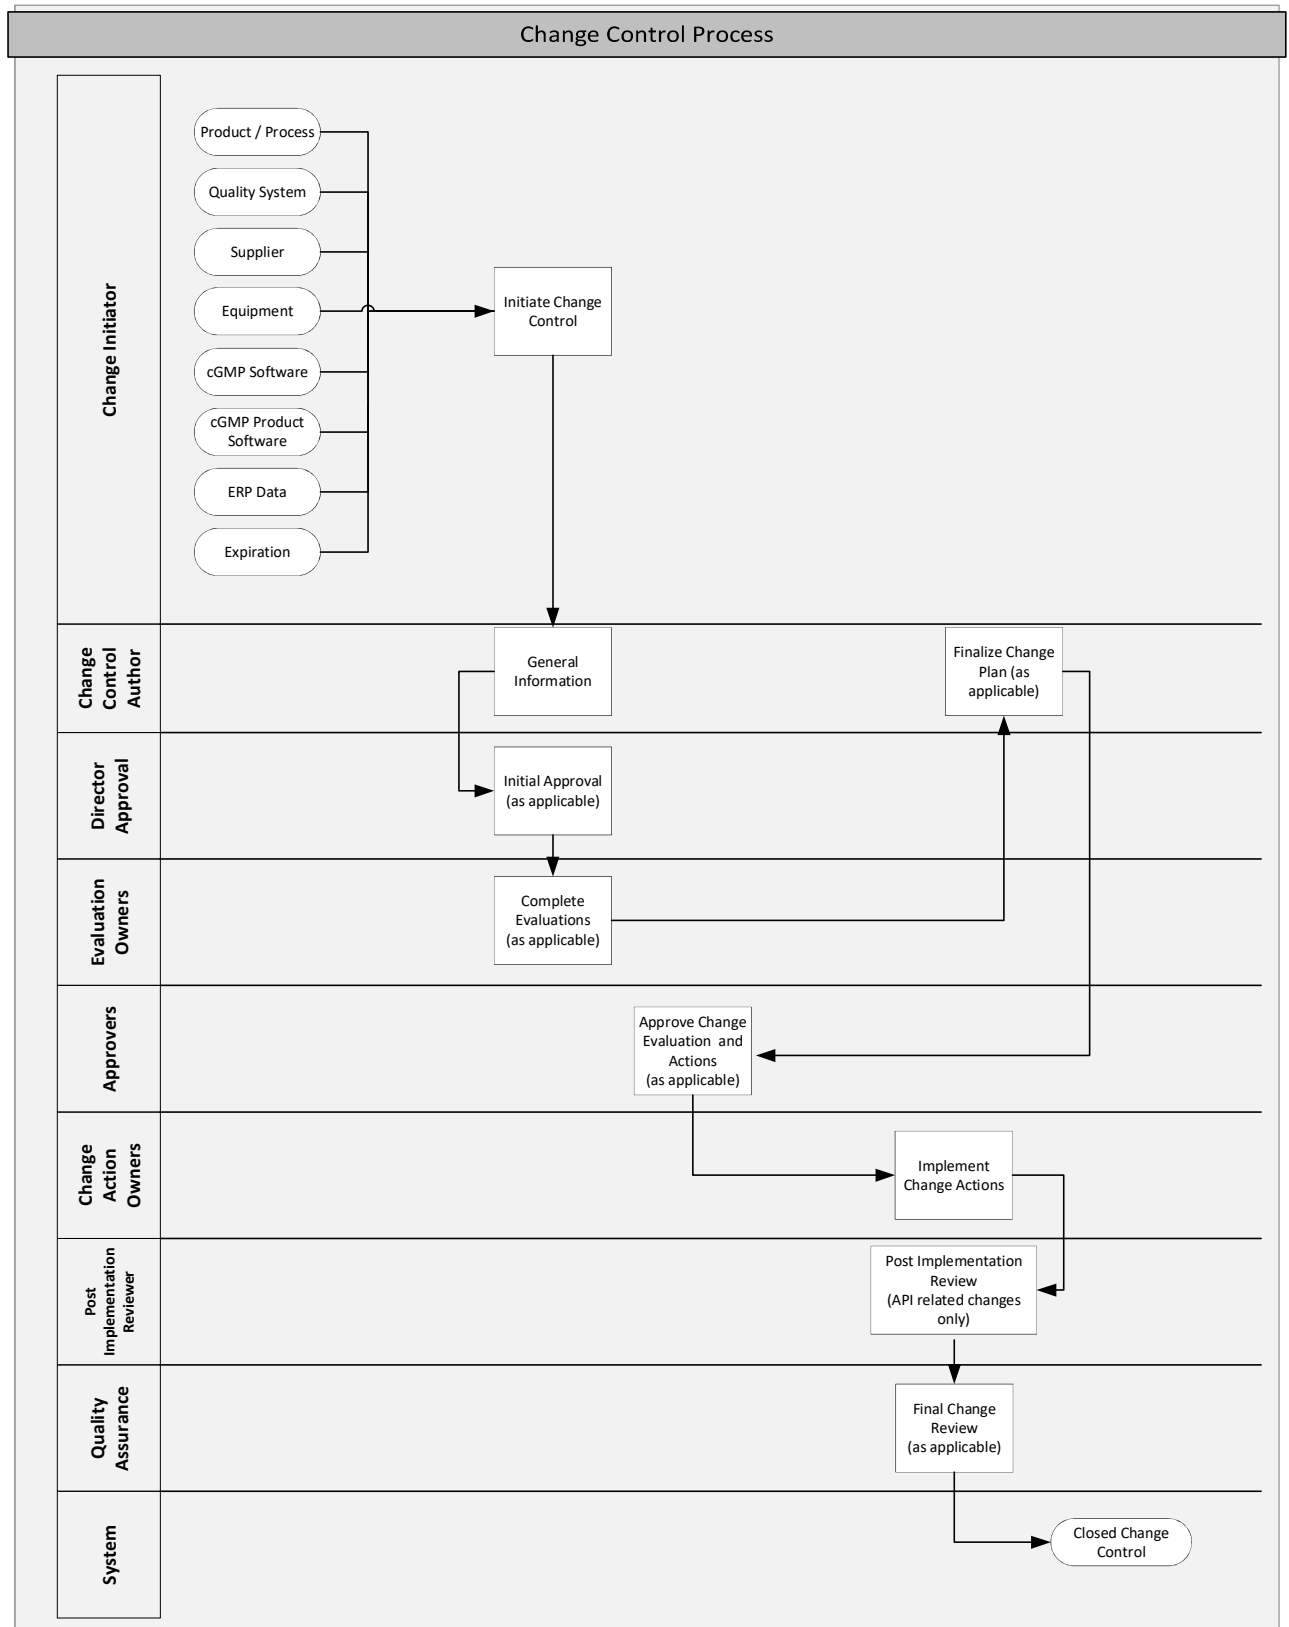

6.1 Overview

The Change Control process consists of the following steps:

It is the responsibility of the user to ensure this is the current revision.

CONFIDENTIAL. Property of Promega Corporation. Do Not Reproduce or Distribute Without the Prior Written Permission of Promega Corporation.

Promega Corporation Madison, WI			Approved		
			Quality Standard Operating Procedure		
Document #:	QSOP24.009	Revision:	9	Effective Date:	Jul 20, 2026
Title:	Change Process				

It is the responsibility of the user to ensure this is the current revision.

CONFIDENTIAL. Property of Promega Corporation. Do Not Reproduce or Distribute Without the Prior Written Permission of Promega Corporation.

Promega Corporation Madison, WI			Approved		
			Quality Standard Operating Procedure		
Document #:	QSOP24.009	Revision:	9	Effective Date:	Jul 20, 2026
Title:	Change Process				

6.2 Change Control Processes

6.2.1 Initiating a Change Record

- 6.2.1.1 To initiate a new change record, log into the electronic quality management system (EtQ) and open the Change Control module
- 6.2.1.2 Change Control records are numbered sequentially with a CC prefix. Once a CC record has been assigned a number, the CC cannot be voided without justification and assistance from the Module Coordinator and/or EtQ Administrator.

6.2.2 Change Record Work Flow

- 6.2.2.1 Select the appropriate Change Type based on the definitions in Section 5 and scope of the planned change. Refer to Appendix 2 for a list of required evaluations by change type. Guidance for completing the change is found in the quality reference sheet:

- QRS24.009.R01 – Supplier Change Notification
- QRS24.009.R02 – ERP Data Change
- QRS24.009.R03 – Expiration Date Change
- QRS24.009.R04 – Product and Process Change
- QRS24.009.R05 – Equipment Change
- QRS24.009.R06 – Quality System Change
- QRS24.009.R07 – cGMP Software Change
- QRS24.009.R08 – cGMP Product Software Change

For large, multi-phase, or multi-system projects, refer to Section 6.4 to determine if a program-level change control is required before initiating individual change records.

- 6.2.2.2 If the change does not impact API, select No. The API evaluation will not appear.
- 6.2.2.3 For changes to Active Pharmaceutical Ingredient (API) processes or systems, refer to Section 6.3. Select the appropriate API change type from the following options:
- Product and Process Change
 - Quality System Change
 - Equipment Change
 - cGMP Software Change

- 6.2.2.4 In the event databases are searched as part of the Change Process, the search criteria should be included to allow reviewers to understand how the information was compiled. The search criteria documented in the change record should include the following:
- The database that was searched
 - The date range used to complete the search (if applicable)
 - The criteria used to complete the search
 - The date the search was completed

It is the responsibility of the user to ensure this is the current revision.

CONFIDENTIAL. Property of Promega Corporation. Do Not Reproduce or Distribute Without the Prior Written Permission of Promega Corporation.

Promega Corporation Madison, WI			Approved		
			Quality Standard Operating Procedure		
Document #:	QSOP24.009	Revision:	9	Effective Date:	Jul 20, 2026
Title:	Change Process				

- Who performed the search

6.2.2.5 Approvals are managed within the change control module.

6.2.3 At any approval step of the change process, the change may be routed back to a previous phase for revision(s). A comment is required by the module when sending a record back to incorporate changes. If a change record is sent back to incorporate changes, re-approval of the subsequent sections that had already been completed is required.

6.2.4 If a change record will not be completed, the record may be voided by the Module Coordinator or EtQ Administrator. A justification for the record to be voided is required.

6.2.5 The workflow (phases) for each change type are provided below:

Change Type Change Phase	Supplier	ERP Data	Expiration Date	Product / Process	Equipment	Quality System	cGMP Software	cGMP Product Software Changes
Initiation & Planning	X	X	X	X	X	X	X	X
Initial Approval				X				
Evaluation	X			X	X	X	X	X
Finalize Change Plan				X	X	X	X	X
Approval to Implement	X	X	X	X	X	X	X	X
Implement Changes	X	X		X	X	X	X	X
Post Implementation Review (For API Changes)	X			X	X	X	X	
Final Review	X			X	X	X	X	X
Closed- Implemented	P	X	X	P	P	P	P	P
Closed- Not Implemented	P			P	P	P	P	P

X = Required Phase

P = Possible phase, dependent upon the outcome of Evaluations and/or actions of the change record.

6.2.6 Changes to the quality system and product/process documents that have minimal or no effect on the product, the process, or the quality system are documented and implemented through the CO Process. Documents in EtQ are revised via a Change Order in the EtQ Document Control module. For instructions on how to complete the Change Order in EtQ, see Control of Documents, QSOP23.001.

6.2.6.1 When making a change per QSOP24.009 and/or updating documents per QSOP23.001, check whether related software systems (e.g., ProPack or similar) have backup forms in the EtQ Document Control Module. If they do, review and update those forms as needed to ensure alignment between the system and EtQ.

6.2.7 EtQ allows users to notify other employees who are not involved with the Change Record. When routing the Change Record between phases, the system prompts users to add names of individuals who will be notified. Notifications do not require action within the EtQ system.

It is the responsibility of the user to ensure this is the current revision.

CONFIDENTIAL. Property of Promega Corporation. Do Not Reproduce or Distribute Without the Prior Written Permission of Promega Corporation.

Promega Corporation Madison, WI			Approved		
			Quality Standard Operating Procedure		
Document #:	QSOP24.009	Revision:	9	Effective Date:	Jul 20, 2026
Title:	Change Process				

6.3 Active Pharmaceutical Ingredient (API) Change Process

6.3.1 API Change Identification and Workflow

6.3.1.1 When the Change Champion identifies Chappelle Manufacturing Center (CMC) as the building impacted, additional questions are prompted (this is not applicable to ERP, EXP and cGMP Product Software Change Types):

6.3.1.1.1 Does this change impact Active Pharmaceutical Ingredient (API) manufacturing or processes? Yes or No.

If the change impacts API, identify the criticality of the API Change and the Owner to complete the API Evaluation:

- Major Change – Change that impacts or has potential to impact API product quality, product specification, validated operating parameters of equipment or systems, or quality system process.
- Minor Change – Change to clarify API related procedures and processes that has no or minimal effect on product quality.

6.3.2 API Evaluation Criteria

6.3.2.1 Active Pharmaceutical Ingredient (API) Evaluation (this evaluation is not applicable for ERP, EXP and cGMP Product Software Change Types):

6.3.2.1.1 Determine how many batches post implementation need to be assessed?

The first batch is required after a change unless appropriate justification is provided. Consideration of additional batch(es) for review post implementation may be needed dependent on the criticality of the change.

- Consider whether stability testing (i.e., new or modified) should be added as a post implementation of this change depending on criticality of the change
- Enter the number of batches to be assessed

6.3.2.1.2 List all individuals involved in the API evaluation as applicable.

6.3.3 API Post Implementation Review Requirements

6.3.3.1 The post implementation review is completed by an API SME and reviewed by an API QA Manager.

6.3.3.2 Identify the first batch impacted by this change using the SAP Identifier – Batch Managed field.

6.3.3.3 Identify additional batch(es) impacted by this change using the SAP Identifier – Batch Managed field.

It is the responsibility of the user to ensure this is the current revision.

CONFIDENTIAL. Property of Promega Corporation. Do Not Reproduce or Distribute Without the Prior Written Permission of Promega Corporation.

Promega Corporation Madison, WI			Approved		
			Quality Standard Operating Procedure		
Document #:	QSOP24.009	Revision:	9	Effective Date:	Jul 20, 2026
Title:	Change Process				

- 6.3.3.4 Did the change have any unintended or adverse impact? If “Yes”, this may require additional actions
- 6.3.3.5 Did the batch(es) assessed meet final product specification? Check the disposition of the batch(es) as part of this decision
- 6.3.3.6 Provide a summary and justification.

6.4 Program-Level Change Controls

6.4.1 When Program-Level Change Controls Are Required

A program-level change control shall be initiated when a project involves multiple interdependent changes that require coordinated oversight. Examples include:

- Multi-phase facility renovations or expansions
- Installation of integrated manufacturing systems (equipment + utilities + facilities)
- Projects where individual changes cannot be fully evaluated without understanding overall project scope and cumulative risk

The decision to initiate a program-level change control is risk-based and shall consider project complexity, system interdependencies, and validation coordination needs.

6.4.2 Program-Level Change Control Contents

Parent change controls provide project-level governance and shall include:

6.4.2.1 Project Scope:

- Overall project description and objectives
- Identification of affected systems, equipment, facilities, and products

6.4.2.2 Risk Assessment:

- Evaluation of cumulative project risk (not just individual change risk)
- Risk mitigation strategy for project execution (if needed)

6.4.2.3 Traceability:

- The program-level change control shall list subordinate change controls as actions
- Subordinate change controls shall reference the program-level change control number

6.4.3 Program-Level Change Control Closure

Program-Level change controls cannot be closed until:

- All subordinate change controls are closed-implemented or appropriately dispositioned
- Cumulative impact assessment is complete

6.5 Implementing Change Records

6.5.1 Implementing Changes (if applicable)

It is the responsibility of the user to ensure this is the current revision.

CONFIDENTIAL. Property of Promega Corporation. Do Not Reproduce or Distribute Without the Prior Written Permission of Promega Corporation.

Promega Corporation Madison, WI			Approved		
			Quality Standard Operating Procedure		
Document #:	QSOP24.009	Revision:	9	Effective Date:	Jul 20, 2026
Title:	Change Process				

- 6.5.1.1 Implementation action owners are notified through EtQ when actions have been approved and can be completed. Actions associated with the change record shall not be completed prior to the approval of the implementation plan, with the following exceptions:
- External Notification can occur prior to Implementation Plan approval.
 - In Product/Process changes, SAP updates to establish inspection plans to control incoming material(s) prior to change implementation can occur during the evaluation phase per RS22193.
 - New part number setup may be completed through the direct material approval process per QSOP17.002 prior to change implementation (this pertains to new part number setup, not changes to existing part numbers or BOMs).
- 6.5.1.2 Action due dates can be extended with an Action Extension Request (if applicable).
- The Action Extension Request is routed to the Change Champion for approval.
 - The new requested action due date is beyond the phase due date, the requester must also submit a Phase Extension Request

6.6 Closing Change Records

Evidence of completion for all Implementation Plan actions must be provided to close the change record. The change record will be reviewed for completeness. Once the review is complete, the change record can be sent to one of two phases, "Close – Implemented" or "Closed – Not Implemented".

6.6.1 Closed – Implemented

This phase is used when all actions have been completed as assigned.

6.6.2 Closed – Not Implemented (if applicable)

This phase is used when a decision to not proceed with the change was made during the process. Actions associated with the change will not be implemented, and the document will need to be sent to a closed status. This phase will allow us to record events that were investigated through the Change Control Process, the steps taken, and the reason for not implementing the changes. To move a Change Record to "Closed – Not Implemented", the Champion must remove all actions from the Change Record and route the document through the remaining phases.

6.6.3 Voiding Change Records

Change Records opened in error may be voided. The Change Initiator or Champion must contact the Change Control Module Coordinator or EtQ Administrator to request the record be voided, providing the justification for voiding. The Change Module Coordinator or EtQ Administrator will void the Change Record in EtQ with the reason documented.

6.6.4 Correcting an error in a Change Record

It is the responsibility of the user to ensure this is the current revision.

CONFIDENTIAL. Property of Promega Corporation. Do Not Reproduce or Distribute Without the Prior Written Permission of Promega Corporation.

Promega Corporation Madison, WI			Approved		
			Quality Standard Operating Procedure		
Document #:	QSOP24.009	Revision:	9	Effective Date:	Jul 20, 2026
Title:	Change Process				

6.6.4.1 In the event a correction is found during the review process, the record should be routed back to a previous phase for edits and should include a description of the error found.

6.6.4.2 If applicable, once a Change Record has moved to a Closed status, the Change Control Coordinator or EtQ Administrator must review the proposed record edits, and route it back for correction.

6.7 System Outage

If the software is unavailable for use, the equivalent form(s) should be used in place of the EtQ module. Refer to Section 9, Related Form (QFRM) for the list.

Promega Corporation Madison, WI			Approved		
			Quality Standard Operating Procedure		
Document #:	QSOP24.009	Revision:	9	Effective Date:	Jul 20, 2026

Title:	Change Process				

Appendix 1: Additional Examples of Form, Fit or Function Change

Examples of Changes that impact or may impact, Form, Fit or Function or may require a notification to customers or regulatory bodies. See below and the additional subsections

- Changes to the product manufacturing process that could impact product performance, intended use or stability
- Changes to the product manufacturing location
- Changes of manufacturing materials, product dimensions, color or physical appearance
- Changes to the packing material or its dimensions
- Changes to labels or package insert content
- Changes that could impact the safety and efficacy of the product, including risk to cause injury to the user and patient

These changes must be assessed to determine if Form, Fit or Function is affected:

Product Design

- The final design, composition or performance of the product
- Final formulation/ product identity
- Product purity or change in level of contaminants
- Product concentration
- Instrument and instrument accessory design changes
- Product documentation – customer facing. Labels, Certificate of Analysis, Instructions for use
- Product Documentation – Internal. Examples include product or user requirements, design files, product or process risk assessments, etc.
- Primary containers/secondary packaging
- Compatibility with other substances, materials, or components

Manufacturing

- Raw Materials - Composition
- Raw Material – Supplier – changes to material by supplier or change in supplier
- Manufacturing equipment substitution
- Method of producing or processing
- Manufacturing scale
- Change in subcontractors for producing / processing

It is the responsibility of the user to ensure this is the current revision.

CONFIDENTIAL. Property of Promega Corporation. Do Not Reproduce or Distribute Without the Prior Written Permission of Promega Corporation.

Promega Corporation Madison, WI			Approved		
			Quality Standard Operating Procedure		
Document #:	QSOP24.009	Revision:	9	Effective Date:	Jul 20, 2026
Title:	Change Process				

- Manufacturing site –
 - Transferred to Madison from another Promega location
 - Transferred to an outside contractor
 - Transferred in from an outside contractor
- Country of Origin

Quality Control

- QC specifications
- QC test method
- Inspection procedures

Product Shipping, Handling and Storage

- Delivery method
- Storage temperature
- Shelf life when shortened (extending a shelf life based on stability data does not require a change package)
- Storage conditions (examples include avoiding light, humidity, non-frost free freezers)

It is the responsibility of the user to ensure this is the current revision.

CONFIDENTIAL. Property of Promega Corporation. Do Not Reproduce or Distribute Without the Prior Written Permission of Promega Corporation.
